Charleston, SC 29411

Dear Mr. McCauley:

Plan-of-Action: Naval Assessment and Control
of Installation Pollutants, Expanded Verification Study
NAS - Jacksonville
Duval County - Ground Water

The Northeast District's Ground Water Section has reviewed the referenced document, dated December 1983. The proposed monitoring well locations for the sites listed at NAS-Jax, NAS-Cecil Field and the U.S. Naval Station-Mayport, in reference to Chapters 17-3 and 17-4, Florida Administrative Code, ground water monitoring requirements are approved. Installation of the monitoring wells may be initiated.

The initial sampling parameters stated for the sites at NAS-Jax and NAS-Cecil Field are approved. However, additional information has been requested to evaluate the initial sampling requirements for the Naval Station-Mayport. The requested analyses of the bilgewater and waste oil from the ships and the effluent in the effluent leaching pond may be waived if the priority pollutant scan run on the effluent for the NPDES certification is submitted. You are requested not to sample the wells at the Naval Station-Mayport until the evaluation has been made.

The quarterly sampling parameters listed for the three facilities are not approved at this time. A review of the initial sampling data will be required prior to establishing the quarterly parameters.

The ground water monitoring plans for the three facilities will continue to be evaluated following the receipt of all previously requested information. Please call if there are questions concerning the requests.

Sincerely,

Catherine C. Farmer
Ground Water Section
